Promia Raven in the "World's Best Technology" Showcase

Cyber Security product contends for top honors

April 2, 2008, Arlington, TX – Promia Incorporated was among the top technology innovators from across the nation and around the world presenting at the March 26-27 WBTshowcase in Arlington, Texas. The Promia Raven product technology, which provides cyber security protection to the US military and commercial banks, was rigorously screened and mentored by WBTshowcase commercialization experts to present to an audience including over 100 venture investors and Fortune 500 licensors.

"We are proud to be selected among the top contenders for this year's World's Best Technology at the WBT Showcase. We welcome the recognition from industry" said John Mullen, President and CEO of Promia. "The revolutionary nature of the technologies presenting at the WBTshowcase makes it a must-attend event for investors and licensing scouts," said Paul Huleatt, WBTshowcase CEO.

The WBTshowcase is the nation's premier event showcasing the largest collection of undiscovered technologies emanating from the world's leading universities, labs and research institutions. Mr. Huleatt highlighted that the companies groomed to present at the WBTshowcase leave with new knowledge and contact to take their technologies to market and beyond. The 2008 World's Best Technologies Showcase brought together over 75 world-class deals and attracted over 450 attendees including over 100 senior investment groups and Fortune 500 licensees.

According to Mr. Huleatt, approximately 1/3 of past WBTshowcase presenters have gone on to secure venture capital or a licensing/strategic partnering agreement with a Fortune 1000 company. To date, past presenters have raised over $400 million in first (or next) round venture capital.

ABOUT Promia Incorporated
Promia, Incorporated is a leading developer and supplier of security tools, based on open standard components with advanced analytic capabilities, to the Fortune 1000 companies and government markets. Its products are used in environments requiring high security, reliability, performance, and scalability.
