

NSES Fishbowl Appliance Data Sheet

Overview

The Intelligent Agent Security Manager™ is a state-of-the-art appliance designed for enterprise security management of data from heterogeneous sensors. The IASM solution includes a global hierarchical system based on a CORBA middleware infrastructure. This central network management system eliminates the need for remote site expertise in security analysis and assessment by centralizing the information at appropriate command levels.

IASM- NSES Appliance Component

IASM Network Security Event Sensor v.7.1 (NSES) is a 1U Network Intrusion Detection Appliance System developed by Promia engineering. NSES management action, user configuration, system configuration, network adapter information, and system maintenance action are all *remotely accessible* through a web interface.
